Facility summary sheet

Features

Easy data input

- New facility data input with minimal number of keystrokes
- Physical documents scanned and added in digital format to the relevant facility (Direct upload from digital camera possible)
- Facility location set on map through simple point-and-click procedure

Speedy response to enquiries

- Easy querying of facility data
- Fine control over query parameters via advanced search tools

Data standardization

- Data standardization through systematization enables more efficient data storage and usage

Compact footprint

- Efficient and compact data storage through process digitization.
- Elimination of storage and handling of physical maps

Image digitization

- Facility pictures and documents are digitized and electronically managed

Functionality

Map display

- Vector and raster data overlay
- Zooming and panning
- Data highlighting

Data Input

- Facility data creation
- Facility data editing and deletion
- Facility maintenance data input
- Facility location input/editing/deletion
- Facility accompanying documents/pictures input

Search

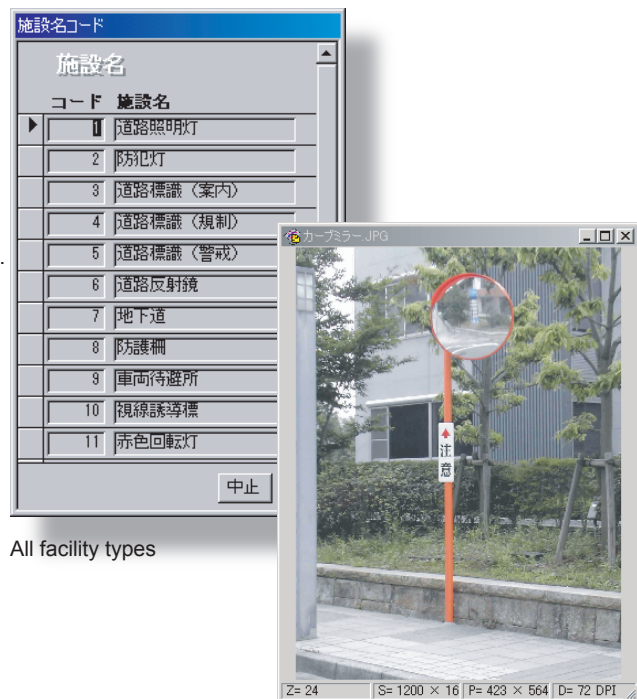

- By facility number
- All facilities
- Map-based search
- By location

Data display

- Facility detailed data
- Facility maintenance history

Output

- Maintenance record sheet, maintenance summary sheet
- Current map display
- Facility accompanying documents and pictures

All facility types

Facility picture

System requirements

Microsoft Windows XP or higher.
